AirGuard

Reduce medical air and oxygen misconnections

AirGuard is an accessory for medical air flowmeters that reduces gas misconnection by requiring a conscious decision with two-handed action to attach tubing to the medical air outlet.

The AirGuard provides:
• bold labelling of the air outlet
• a physical barrier that is swung aside before tubing can be connected to air

Oxygen is left unchanged and is freely accessible for emergencies.

Install AirGuards in a 400 bed hospital for the cost of 1 patient day in ICU

1 x AirGuard AUD$25
(flowmeter not included) Discounts for quantities of 100+ on application

Fitting: The AirGuard is best fitted by clinical or biomedical engineering.

Quantity: A 400 bed hospital with 300 air flowmeters thus needs 300 AirGuards. About 10% more AirGuards may be needed in the 12 months after installation as more medical air flowmeters are discovered in storage.

Cleaning: AirGuards can be cleaned with alcohol or detergent based products.

The AirGuard disk is selected to fit the flowmeter. Flowmeters that have been fitted include:

Compact
Chrome Body
Anaequip
CIG
Comweld
Therapy Equipment
EZI-FLOW
Diamond range
